QDOR™ Product Submittals Accepted Until July 3, 2009

(St. Paul, MN March 31, 2009): The Quality Data Oversight and Review (QDOR™)

program is accepting rolled erosion control products for review during the August 2009 meeting of the Erosion Control Technology Council. All products received by July 3, 2009 will be eligible for review. Anything submitted after that would be reviewed during the December 2009 meetings.

QDOR™ has been developed by the Erosion Control Technology Council to assist end users of erosion control products in specifying and using the proper type of erosion/sediment control product on their jobs. QDOR™ seal indicates the erosion control product has been manufactured and tested according to industry standards much like the well-recognized Underwriters Laboratory © (UL) label applied to many electronic appliances.

If you are interested in submitting a product for review, contact Laurie Honnigford, Executive Director, ECTC at +1 651-554-1895 or laurie@ectc.org or visit the QDOR™ website.
